

BCL2L1 — transcript structure and translated protein product

Mus musculus · 9 annotated transcript(s) · primary NM_001289739.2 -> NP_001276668.1 · 235 aa · transcribed right to left on the minus strand · panel A in nucleotides, panel B in amino acids

Which coding exons does each transcript use, and which part of each translated protein do they encode? Exon identity in panel B is compared on genomic CDS coordinates; differences are descriptive annotation differences, not validated splicing events.

A

B
