

BCL2L1 · C1 alignment detail · Homo sapiens

primary aa 126–188 on NP_001304849.1 = alignment columns 126–188 · 1 of 9 alternative models affected · ±12 columns of flanking context · primary exons E1

Which residues does this candidate interval change, and in which protein models?

primary protein residue (reference)

residue matching the primary

residue differing from primary (substitution)

gap in this isoform (insertion / deletion)

variable column

conservation

coding exon of the primary protein

candidate interval

63 variable and 63 gap-containing columns inside the candidate interval · row label: protein model, role, identity within the interval.
Above each block: alignment column · below it: NP_001304849.1 residue position (aa).
Exploratory candidate region — not a biologically validated splicing event.
