

Major variable blocks: 1 · major gap blocks: 1 · 63 variable and 63 gap-containing columns of 233.
Conservation is the fraction of the shown models carrying the column's most frequent residue, so a gapped column scores low.
Filled marker: curated model · open marker: predicted model · identity: percentage of aligned residue pairs identical to the primary protein.
Exploratory analysis; no isoform difference shown here is a validated splicing event.
