

BCL2L1 · C1 alignment detail · Mus musculus

primary aa 191–191 on NP_001276668.1 = alignment columns 198–198 · 8 of 8 alternative models affected · ±12 columns of flanking context · primary exons E2

Which residues does this candidate interval change, and in which protein models?

primary protein residue (reference) residue matching the primary residue differing from primary (substitution) gap in this isoform (insertion / deletion) variable column

conservation coding exon of the primary protein candidate interval

1 variable and 0 gap-containing columns inside the candidate interval · row label: protein model, role, identity within the interval.
Above each block: alignment column · below it: NP_001276668.1 residue position (aa).
Exploratory candidate region — not a biologically validated splicing event.
