

9 protein models · columns 1–249 of 249 · page 1 of 1 · 80 alignment columns per block · MAFFT · primary NP_001276668.1 / NM_001289739.2

Which residues actually differ between the protein isoforms of this gene?

primary protein residue
 residue matching the primary
 residue differing from primary
 gap in this isoform
 variable column
 conservation
 exploratory candidate interval

Above each block: alignment column · below it: NP_001276668.1 residue position (aa). Conservation is the fraction of the shown models carrying the column's most frequent residue, so a gapped column scores low.

Exploratory analysis; no isoform difference shown here is a validated splicing event.
