

PTPN11 — exploratory candidate ranking

5 exploratory candidate region(s) · amino-acid intervals on the primary protein · ranked by evidence score

Which isoform-difference regions carry the most transparent support? Exploratory candidate regions only — Biological validation: not validated. The evidence score summarises isoform support, exon-boundary agreement, alignment support and domain context; a score is a measure of support, not a validation.

Rank	Candidate	Interval (aa)	Length (aa)	Affected isoforms	Supporting comparisons	Evidence score	Evidence strength	Biological validation
1	C1	465–592	128	0	8	0	low	not validated
2	C2	408–411	4	0	6	0	low	not validated
3	C3	409–412	4	0	1	0	low	not validated
4	C4	409–412	4	0	1	0	low	not validated
5	C5	46–46	1	0	6	0	low	not validated
