

# PTPN11 — within-species protein isoform alignment

5 protein models · 597 alignment columns · MAFFT · primary NP\_001317366.1 · 2 major variable block(s) · 2 major gap block(s)

Within-species isoform alignment, not a cross-species conservation analysis; no isoform difference shown here is a validated splicing event.

primary protein (aligned residues)    gap in this isoform    identity to primary  
alternative isoform (aligned residues)    residue differing from primary    exploratory candidate interval
