

PTPN11

Comparative exon–domain boundary matrix · signed distance to nearest representative-domain edge

Which exon–domain boundaries are comparable across species, and does each species place that boundary at the same distance from a domain edge?

	1	2	3	4	5	6	7	8	9	10	11	12	13	14
<i>H. Sapiens</i>	+1	+42	+1	-41	-2	+6	+39	+65	+118	-119	-63	-40	+10	+48
<i>M. Musculus</i>	+1	+42	+1	-41	-2	+6	+39	+65	+118	-119	-63	-40	+10	+48
<i>R. Norvegicus</i>	+1	+42	+1	-41	-2	+6	+39	+65	+118	-119	-63	-40	+10	+48

Columns: comparable-boundary groups (CBG) · "t" marks a tentative alignment mapping · near-edge threshold ± 5 aa

■ Near domain edge ■ Inside domain ■ Outside annotated domains ■ No comparable boundary mapped ■ Species analysis pending
