

PTPN11 — exploratory candidate ranking

Mus Musculus · NP_035332.1 · 1 exploratory candidate region(s) · amino-acid intervals on the primary protein · ranked by evidence score

Which isoform-difference regions carry the most transparent support? Exploratory candidate regions only — Biological validation: not validated. The evidence score summarises isoform support, exon-boundary agreement, alignment support and domain context; a score is a measure of support, not a validation.

Rank	Candidate	Interval (aa)	Length (aa)	Affected isoforms	Supporting comparisons	Evidence score	Evidence strength	Biological validation
1	C1	409–412	4	2 of 2	1	28	low	not validated

- exploratory candidate region · Biological validation: not validated
- evidence score relative to the highest-scoring candidate
