

PTPN11 · isoform alignment (residue level) · Homo sapiens

5 protein models · columns 1–320 of 597 · page 1 of 2 · 80 alignment columns per block · MAFFT · primary NP_001317366.1 / NM_001330437.2

Which residues actually differ between the protein isoforms of this gene?

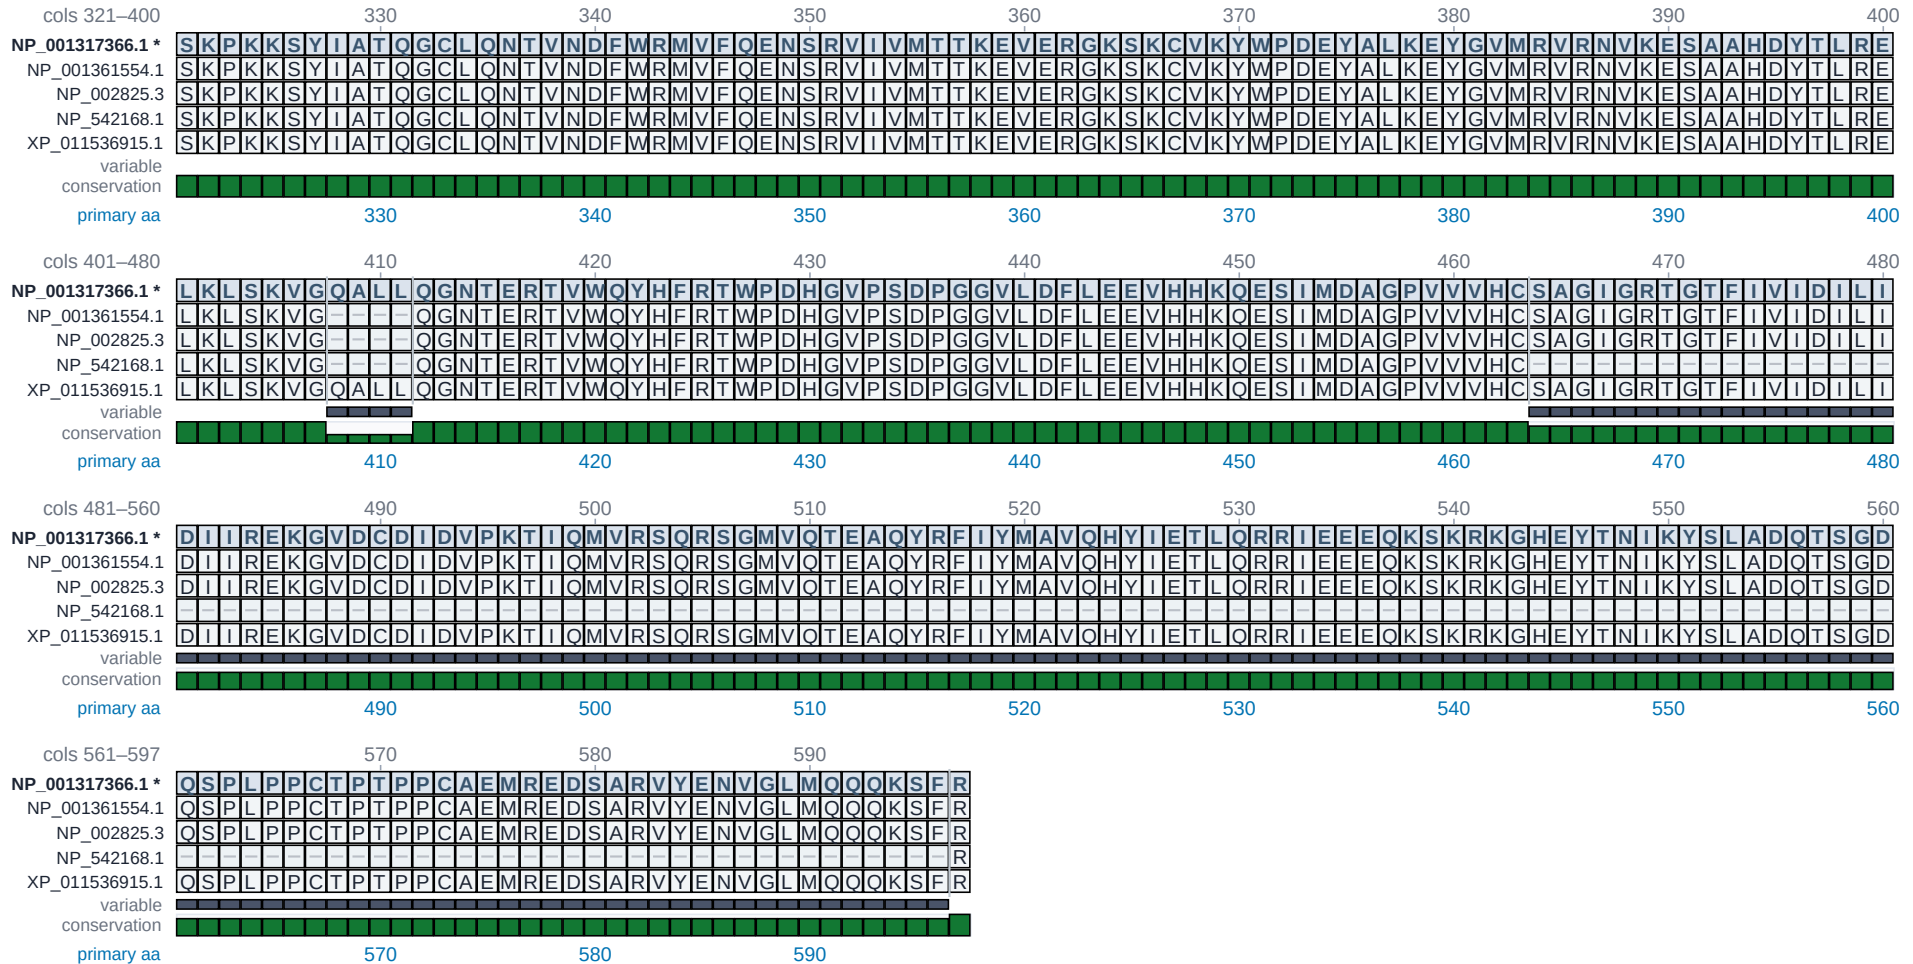

Above each block: alignment column · below it: NP_001317366.1 residue position (aa). Conservation is the fraction of the shown models carrying the column's most frequent residue, so a gapped column scores low.

Exploratory analysis; no isoform difference shown here is a validated splicing event.
