

PTPN11 · isoform alignment (residue level) · *Mus musculus*

2 protein models · columns 1–597 of 597 · page 1 of 1 · 80 alignment columns per block · MAFFT · primary NP_035332.1 / NM_011202.3

Which residues actually differ between the protein isoforms of this gene?

primary protein residue residue matching the primary residue differing from primary gap in this isoform variable column conservation exploratory candidate interval

Above each block: alignment column · below it: NP_035332.1 residue position (aa). Conservation is the fraction of the shown models carrying the column's most frequent residue, so a gapped column scores low.

Exploratory analysis; no isoform difference shown here is a validated splicing event.
