

PTPN11 · C1 alignment detail · *Rattus norvegicus*

primary aa 409–412 on NP_001171064.1 = alignment columns 409–412 · 1 of 1 alternative models affected · ±12 columns of flanking context · primary exons E11

Which residues does this candidate interval change, and in which protein models?

primary protein residue (reference) residue matching the primary residue differing from primary (substitution) gap in this isoform (insertion / deletion) variable column

conservation coding exon of the primary protein candidate interval

3 variable and 3 gap-containing columns inside the candidate interval · row label: protein model, role, identity within the interval.
Above each block: alignment column · below it: NP_001171064.1 residue position (aa).
Exploratory candidate region — not a biologically validated splicing event.
